

- 1) Create a sketch and lay out the basic measurements

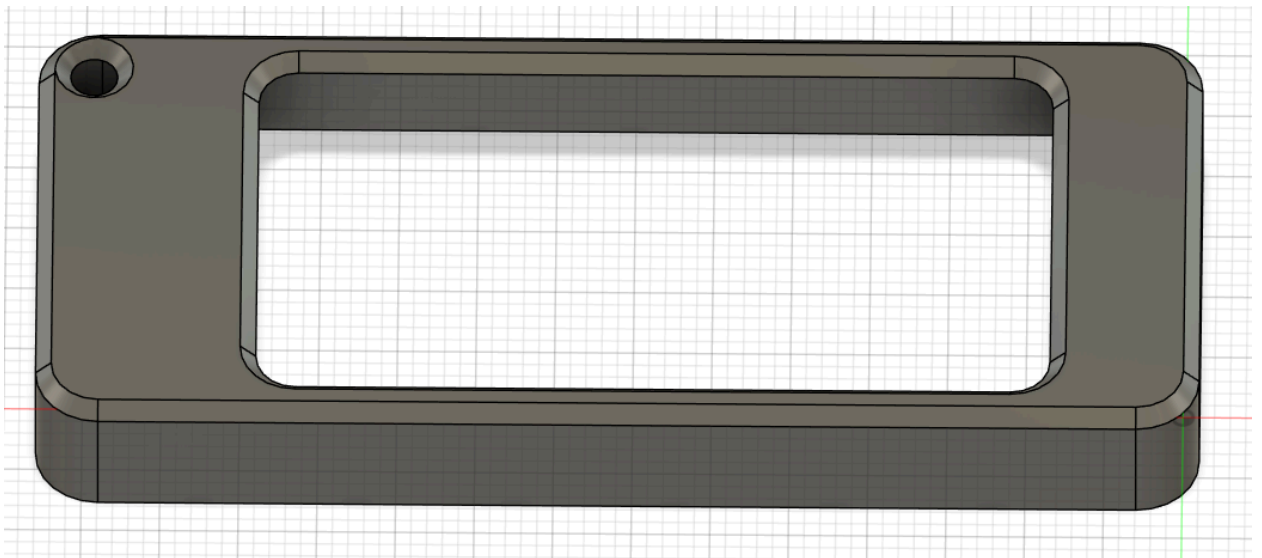

- 2) Add a fillet to the corners to round it off

- 3) Add an offset to create the walls and add a slot for the screen.

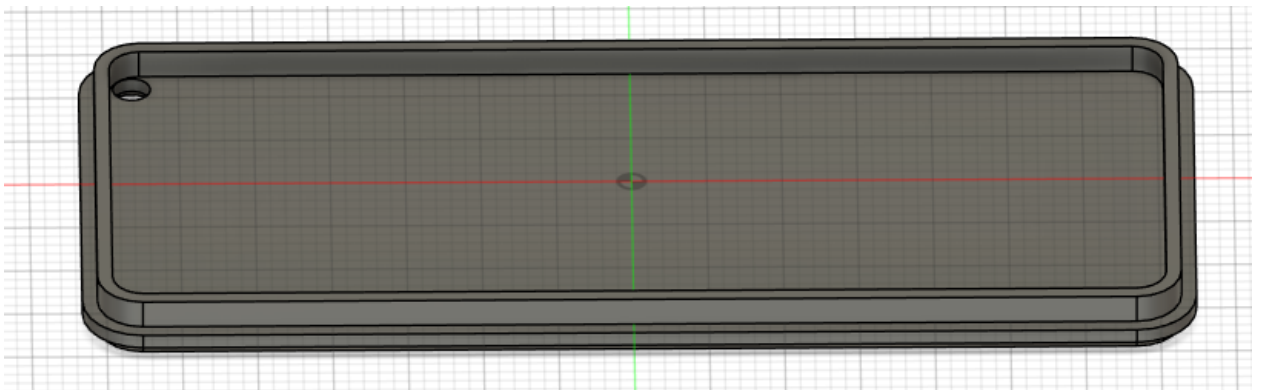

- 4) Extrude the top face 1mm and the bottom face 8mm to create the 3d object and add a chamfer

- 5) Create a sketch for the back of the case

- 6) Extrude the top 2mm and the bottom 2mm. Then chamfer the back plate

- 7) Add a finger notch by creating a sketch on the side of the bottom and cutting it into the bottom's body.
